

Delivery built for IT equipment.

The problem we fix

- General courier apps price by parcel, not by what it takes to move a 40U rack up to level six.
- Drivers arrive without a trolley, without a helper, or in a vehicle that will not take the load.
- You have no live visibility once the goods leave your door.
- Proof of delivery is a photo in someone's phone, if it exists at all.

How it works

1

Post the job

Item, size, weight, floor level, lift access, helper needed. Under a minute.

2

Drivers bid

Verified drivers who have seen the full scope quote their own price.

3

You choose

Take the bid you want. Price is agreed before anyone moves.

4

Track & close

Live GPS, e-signature, photo proof, invoice — all in the app.

Built for the way equipment actually moves

What you need	What the app does
Right vehicle, first time	Motorcycle through to 24 ft lorry. You state the load; only drivers who can take it bid.
Two-man lifts	Helper is an option on the job, priced in the app — not negotiated at the door.
Site constraints	Floor level, lift or stairs, loading bay and time window are part of the job, not an afterthought.
A paper trail	Timestamped photo proof and e-signature on every delivery, stored against the job.

YOUR FIRST 10 DELIVERIES FREE

We load your account with credits covering the delivery fee on your first ten jobs, helper included. No contract, no minimum spend, no expiry date. Nothing to sign to start.

Set up your account before your first job

Tell us one typical delivery — collection address, delivery address, time window — and we will have it ready.
